WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Chain case: 2 mm sheet box 80 x 40 mm, from 210 mm above the wall top to 40 mm over the hand wheel shaft; bolts to the frame bearer below and through the floor notch. Seal the seams.
Hand wheel: bought 320 mm wheel with a 12-hole rim (drill 11 mm holes on a 298 mm circle if it has none), on a 25 mm shaft in two flange bearings on the case, 860 mm above the floor.
Chain: 08B-1, 15-tooth sprockets on the hand wheel shaft and on the line shaft, 1:1, tensioned by slotting the upper bearings.
Line shaft: 25 mm bright bar in three lengths with two couplings, five pillow blocks on 6 mm hangers under the frame bearers, through the trucks to a sprocket and chain on each drive wheel.
Lock pin: spring plunger on the case; it drops into a rim hole.
Check: one turn moves the deck about 283 mm; both ends move together.
