**WHERE IT GOES**

This part in colour, its neighbours in grey

**HOW TO MAKE IT AND HOW IT FITS**

About 52 litres. Top 450 x 450 mm; 150 mm straight sides; then a 270 mm taper to a 200 x 150 mm outlet over the rotor housing.

Cut four tapered side panels and four straight panels from 2 mm sheet; weld the seams outside and grind smooth inside so wet coal does not hang up.

Grille: 6 mm flat bars across the top at 50 mm pitch, 25 mm deep, welded at both ends; lumps over about 44 mm stay on top.

Fit: the outlet welds to the top of the rotor housing; two 6 mm brackets bolt it to the carriage posts.

Check: fill with 52 L of water before fitting; no leaks.
