WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make ten, five a wall. Saw UPN 80 channel 2,400 mm long, square ends. It lies flanges down: the flat 80 mm web on top, flanges on the pads.

Rail: 20 mm round bar along the middle of the web, stitch welded both sides, 40 mm welds every 250 mm. Grind the joint ends flush.

End modules: stop the bar 70 mm short of the outer end.

Fishplates: 6 x 30 x 200 mm flat, one each side across each joint, two M12 bolts in 14 x 24 mm slots so the joint can slide 6 mm.

Pads: 200 x 150 x 10 mm plate, one every 800 mm and under each joint, bedded level on a thin lime-sand mortar on the wall top.

End stops: 8 mm plate box 60 x 80 x 200 mm, rubber face, two M12 bolts down through the web at each track end.

Check: bar straight within 2 mm over 2.4 m; tops of the two wall tracks level with each other within 5 mm.
