WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make five, one per side B truss module, 1,378 mm long.
It sits on the shelf brackets of the module's end verticals, 20 mm out from them, top 750 mm above the floor; two M10 bolts down through each bracket.
Joints over the splices: ends square and flush within 0.5 mm so the carriage wheels roll across without a step.
End stops: a 40 x 40 x 20 mm block welded on top, 3,090 mm each side of the deck middle (end modules only).
Check: rail straight and level within 2 mm over the deck.
